ITE2953 - Programming Group Project 25S1

Project Title

Local Tourist Day-Visit Planner and Information System

Background

Sri Lanka has many places of interest that are not well documented online, especially at local level. Tourists visiting these areas often struggle to find reliable, organised information to plan a one-day visit.

In this project, you will design and implement a **web-based system** to help a tourist plan a one-day visit to places of interest located **within a 25 km radius of your home**.

This is an **individual project**. However, you must work with **four colleagues acting as stakeholders** to identify real user needs and validate your requirements.

Project Objective

To practise requirements analysis, system design, implementation, and presentation by developing a small but realistic tourism information and visit-planning web application based on your own locality.

Scope and Constraints

- The system must include **at least 10 places of interest** within 25 km of your home
- Categories may include: religious, nature, heritage, cultural, etc.
- **No booking or payment features**
- Focus on **information and visit planning**
- The project must be developed using the approved technology stack
- Evidence of stakeholder consultation is required

Required Features (Minimum)

Tourist User

- View list of places of interest
- Filter places by category
- View essential details (description, opening times, travel tips, distance)
- View location on map
- Create a simple one-day visit plan by selecting places

Administrator

- Add, edit, and delete place information

Stakeholder Requirement

You must consult **four colleagues (who are in the same group as you are)** and:

- Identify what information a tourist needs
- Validate your requirements with them
- Include evidence of this in your SRS

Deliverables

1. Software Requirements Specification (SRS)
2. System Design (diagrams, UI mockups, database design)
3. Working web application (core features)
4. Git repository with commit history
5. Project presentation and demonstration

Expected Learning

This project will help you practise:

- Real requirements elicitation
- Web-based system design
- Implementation of a small information system
- Professional presentation of technical work
